

# Year 3 Computer Systems and Networks: Connecting Computers

## SUBJECT SPECIFIC VOCABULARY

<b>digital</b>	storing, using, or sending information electronically.
<b>input</b>	information fed into a data processing system or computer.
<b>output</b>	the information produced by a computer.
<b>networks</b>	a group of two or more computers that are linked together.
<b>process</b>	a series of actions which are carried out in order to achieve a particular result.
<b>program</b>	a defined set of algorithms or processes that are completed in order to achieve a task.
<b>switch</b>	is a device used to build a network connection between the attached <b>computers</b> (allows <b>computers</b> to talk to each other).
<b>server</b>	a computer program or device that provides a service to another computer program and its user, also known as the client.
<b>Wi Fi</b>	is a way of connecting to a computer network using radio waves instead of wires.
<b>wireless access point</b>	a device that creates a wireless local area network, or WLAN, usually in an office or large building.

## STICKY KNOWLEDGE

That digital devices store, use or send information electronically.

That networks can connect computers together.

## KEY SKILLS

- Select inputs and outputs to create simple process.
